EDUCATION

Singapore University of Technology and Design

Singapore

Sept 2023 to Present

- Bachelor of Science (Design and Artificial Intelligence)
- Minor in Computer Science
- Minor in Design, Technology and Society
- GPA 4.43/5.0, Global Merit Scholarship Holder, Honours list 2023/24
- Date of graduation: May 2027

Chalmers University of Technology

Sweden

Jan 2026 to Jun 2026

- Exchange program
- Coursework in Design for Experience, Human-Robot Interaction (HRI), Introduction to AI and Game Engine Architecture (C#)
- Applied Scandinavian usability principles (intentional minimalism, multi-sensory feedback) across hybrid international teams

Singapore Management University x Universiti Brunei Darussalam

Singapore, Brunei

Jun 2024 to July 2024

- 1-month cultural immersion program on E-business digital transformation and AI

School of the Arts

Singapore

Jan 2017 to Nov 2022

- International Baccalaureate (IB), specializing in Visual Arts, IB score: 40/45

WORK EXPERIENCES

Govtech

Singapore

UX Designer Intern

June 2026 to Sept 2026

- Researched and proposed multi-brand design guidelines to align visual identity systems across multi-stakeholder enterprise initiatives.
- Designed responsive data-dense interfaces and complex task flows across desktop, tablet, and mobile, establishing scalable UX frameworks for multi-role workflows.
- Architected an extensible global navigation architecture and wayfinding system, defining modular patterns and responsive behaviors for complex enterprise user flows.
- Built high-fidelity, interactive code-based prototypes to stress-test complex interaction logic, uncover edge cases, and run usability testing (UT)
- Streamlined developer handoff by creating production-ready design files, recording video walkthroughs, and sharing custom-coded UI components built within the internal design system to accelerate engineering integration

Govtech (Girls in Tech Program)

Singapore

UX Designer

May 2026 to July 2026

- Collaborated closely with an Govtech mentor to strategically enhance the narrative storytelling, structural layout, and overall visual design of a professional design portfolio
- Migrated and modernized the portfolio platform from Google Sites to a custom Figma-based solution, resolving structural rigidity and significantly improving page loading performance
- Engineered a scalable design system using Auto Layout and dynamic constraints to ensure consistent interface construction and optimize the end-to-end design workflow
- Leveraged AI-assisted development workflows (Claude) to architect, build, and deploy a responsive web platform hosted via GitHub Pages on a custom domain

Home Team Science and Technology Agency (HTX)

Singapore

UI/UX Design Intern

Aug 2025 to Dec 2025

- Designed informative one-pagers and 3D visualizations using Blender and Adobe Illustrator to communicate complex startup technologies to non-technical audiences
- Conducted country-level research on innovation and science & technology ecosystems across the UK and Europe to inform startup collaboration strategies
- Researched and synthesized emerging technologies such as radio-frequency sensing and immersive displays, tailoring content and visuals to target audiences and presenting technical material in clear, accessible formats

ACADEMIC PROJECTS

Chalmers | Human-Robot Interaction (HRI)

Sweden

Embodied Robotic Mediator

May 2025 to Sept 2025

- Designed and prototyped an embodied robotic interface aimed at enhancing a presenter's real-time situational awareness and audience connection
- Co-led a 24-participant between-subjects study using a Wizard of Oz methodology; independently moderated testing sessions and designed cognitive load questionnaires based on empirical SART and NASA-TLX frameworks

Chalmers | Design for Experience

Sweden

Reimagining Car Exterior Lights

May 2025 to Sept 2025

- Evaluated automotive exterior lighting usability through empirical user studies utilizing AttrakDiff, semantic differential scales, and qualitative UX Curves
- Drove the team's ideation phase by introducing custom brainstorming frameworks—including Dreamscape, Tug of War, and Idea Box—to synthesize research into concrete product concepts
- Presented synthesized research findings and final design concepts to industry stakeholders at Lynk & Co, Gothenburg, Sweden

Service Design Studio | AMD

Singapore

Workflow automation for reliability engineering team at AMD Singapore

May 2025 to Sept 2025

- Conducted user research and workflow analysis with AMD's reliability engineering team to identify bottlenecks in manual Excel-based data processes
- Designed and prototyped a web-based interface using Figma and React.js to streamline data entry, visualization, and reporting tasks
- Collaborated with engineers to translate process requirements into intuitive UI components, improving efficiency and reducing repetitive manual operations

Human-Computer Interaction and AI Module

Singapore

66 Days (a budgeting app for University Students)

May 2025 to Sept 2025

- Conducted user interviews and surveys with Singapore University students to identify spending habits, financial challenges, and behavioral motivations behind budgeting lapses
- Synthesized findings into personas and key insights that guided app features such as a "Splurge Meter" and motivational habit-tracking elements
- Designed and iterated mid-fidelity prototypes in Figma, conducting 10 heuristic evaluations across 2 design iterations to systematically resolve usability friction and refine interface clarity
- Developed a high-fidelity interactive prototype using React + Vite, translating validated user flows into functional UI components

Product Design Studio

Singapore

Redesigning the future of EV charging

Jan 2025 to April 2025

- Led a 10-person team to design an autonomous EV charging robot, translating mobility research into a physical chassis optimized for tight urban constraints
- Engineered 3D mechanical models and dynamic docking animations (Fusion 360, Blender) to validate system architecture and user interaction.

CO-CURRICULAR ACTIVITIES

Singapore University of Technology and Design

Singapore

House Guardian Exco (Floor Events)

June 2024 to May 2025

- Hosting events, engaging with residents of various backgrounds, ensuring a vibrant hostel life
- Floor Events Exco: Organised welfare packing and was the main in-charge for floor events for 1000+ hostel residents. Worked closely with exco team and upper management on administrative and logistics matters

ADDITIONAL INFORMATION

- **Design & Prototyping:** Figma, FigJam, Auto Layout, Design Systems, Interactive Prototyping, 3D Prototyping (Blender, Fusion 360), Adobe Creative Suite (Illustrator, Photoshop, Premiere Pro, After Effects), Miro
- **UX Research & Evaluation:** Usability Testing (UT), Heuristic Evaluation, Cognitive Workload (NASA-TLX, SART), AttrakDiff, UX Curves, Semantic Differential Scales, User Interviews, Journey Mapping
- **Technical & Development:** HTML/CSS, JavaScript, React.js, React Native, C#, Python, GitHub, AI-Assisted Development, Data Analysis (Pandas, Matplotlib, MATLAB)
- **Conquered a lifelong fear of heights by hiking Slovenia's Julian Alps! — and learned the value of strategic pivots by knowing exactly when it was time to turn the hiking party around. (+ did a roadtrip around Slovenia where I saw many waterfalls & learnt how to skip stones!)**
